CLAIMS

- 1 1. A method of work sharing and communicating over the
- 2 internet with a web site system that includes at least a
- 3 communication component and a data storage component allowing
- 4 users in professional offices to electronically input data over
- 5 the internet comprising,
- electronically storing the data received over the internet in the data storage component of the web site system;
 - automatically determining to which other related portions of the web site system the electronically stored data will be sent;
 - automatically distributing the electronically stored data to the automatically determined other related portions of the web site system;
- 14 electronically storing the data distributed to the other
- 15 related portions of the web site system in the data storage
- 16 component; and

n

- 17 automatically communicating over the internet to other
- 18 relevant users of the newly stored data in the web site system.
- 1 2. The method of claim 1, wherein said automatically
- 2 determining is controlled by a computer program programmed to

- determine which portions web site 3 of the system the
- electronically stored data will be sent. 4
- The method of claim 2, wherein the computer program 3. 1
- controls determining to which portions of the web site system 2
- the electronically stored data is relevant, and enacts the 3
- automatic distribution to distribute the electronically stored 4
- data accordingly. 5
- The method of claim 3 wherein the portions of the web 4. 1 2 site system further comprise portions of a knowledge-management system.
 - 5. The method of claim 4 wherein the knowledge-management system further comprises a service industry knowledge management system.
 - 6. The method of claim 5, wherein the service industry is from the group consisting of a medical practice, hospital, and a medical health maintenance organization.
 - 7. The method of claim 5, wherein the service industry is 1
 - from the group consisting of a law office, law firm, courthouse, 2
 - and a legal business entity. 3
 - The method of claim 5, wherein the service industry is 8. 1
 - from the group consisting of an accounting firm, tax firm, 2
 - 3 temporary employment firm, financial and employment business
 - entity. 4

- 1 9. The method of claim 1, wherein the electronic storage
- 2 occurs on a remote data processing machine that can be accessed
- 3 from remote terminals via a channel from the group consisting of
- 4 the internet and an intranet.

- 1 10. The method of claim 1, wherein the automatic
- 2 distributing is controlled by a computer program programmed to
- 3 distribute the electronically stored data to the automatically
- 4 determined portions of the web site system.
 - 11. An apparatus for work sharing and communicating comprising:
 - a computer at a web site system that includes at least a communication component and a data storage component allowing users in professional offices to electronically input data over the internet;
 - a data storage device for electronically storing the data electronically inputted into the web site system;
- 9 a source of a computer program for automatically
- 10 determining to which other related portions of the web site
- 11 system the electronically stored data will be sent;
- 12 a source of a computer program for automatically
- 13 distributing the electronically stored data to the automatically
- 14 determined other related portions of the web site system;

- a data storage device for electronically storing the data distributed to the other related portions of the web site
- 17 system; and

[]

5

- 18 a source of a computer program for automatically
- 19 communicating over the internet to other relevant users of the
- 20 newly stored data in the web site system.
- 1 12. The apparatus of claim 11, wherein the web site system
- 2 includes terminals intercoupled to the computer by a link.
 - 13. The apparatus of claim 11 wherein the data storage comprises data storage device that stores the first input data and a data storage device that stores the data distributed to the other related portions of the web site system.
 - 14. A method for enrolling and grouping users in professional offices comprising:

assigning enrolled users intro specific work groups;
assigning the specific work groups levels of access to a web
site system over the internet;

- 6 limiting the specific work group to the assigned level of
- 7 access to the web site system; and
- 8 providing communication capabilities over the internet to
- 9 the specific work groups which are limited to the work groups
- 10 assigned level of access.
